Legenda Dublat In Romana In Rolurii Principale Category:Cinema of Romania Category:Romanian film series Category:Romanian silent films Category:Serbian filmsQ: Reuse bean factory in spring I'm using spring 2.5.x, but I think the answer will be the same in 4.0.x I want to have a bean factory that will allow the same instance to be shared by several components, for example using a singleton (it can be modified by the components though). There are 2 ways I can think of doing this: 1) Use a singleton bean factory and pass an instance of it to each of the components, but this way it's only 1 instance, and can't be modified at runtime. 2) Create a subclass of ApplicationContext (with the singleton pattern) and have all the components call it's getBean() method, but this way the whole object graph will be reinitialized every time the component wants a bean. What are the best practices for this kind of problem? A: If you need the same bean instance throughout the whole context (i.e. not as a component scoped bean) then just make it a singleton bean. And if you need the same bean instance as a component scoped bean you need to call getBean() each time - not getBeanFactory().getBean(.) because getBean() caches the instance. Differential expression of enzyme activity in human tumors of the gastrointestinal tract. Specific alkaline phosphatase is expressed in normal epithelial cells of the gastrointestinal tract, and is predominantly associated with the basolateral plasma membrane. Changes in the expression of this enzyme by various carcinogenic agents may be a reflection of the loss of normal cellular function and/or the initiation of a malignant phenotype. To investigate this issue, the level of specific alkaline phosphatase activity was assessed in normal and neoplastic epithelia of the gastrointestinal tract. Nodular goiter, diffuse goiter, gastric and duodenal ulcer disease, gastric cancer, duodenal adenocarcinoma, and colon adenocarcinoma were obtained from human surgical specimens. 2d92ce491b
