Unterit Software, habilitation bundesweit. Since 1999. Undo It is the only tool that can recover deleted data and files. Undo It is not a data recovery program. It will not undelete files that are accidently deleted on a harddrive or usbstick. It will not recover files that are damaged or deleted by virus's. It will find files that are removed from the recycle bin. What makes Undo It unique is the ability to search for lost files by using a list of file types, or name(case sensitivity) and by performing an image search of the contents of the target drive. Undo It can be used on any kind of file system disk, external, or internal. It is intended for use

on ntfs, fat32, exfat, ntfs and fat32. With Undo It you will be able to recover files that are not visible in the recycle bin, or files that are so small that only the 8.3 filename is saved in the recycle bin. How does it work? At times a file may become misaligned within the harddrive or a bad sector on the disk may cause the file to be replaced by another file (bad sector patch). When this happens, the file may be moved from the original location to the recycle bin. This means that it is no longer available to be recovered. Undo It finds these files by scanning every sector on the drive. Undo It uses advanced search techniques to identify where the file may be and to find out which sectors it occupies, even when the file is not present on the same location on the harddrive. Undo It searches the image of the drive from sector 0 to the end of the drive (32 or more gigabytes). If the file is not located in the first 48% of the drive, it can be recovered by searching the image of the drive from sector 0 to the end of the drive. If you would like to restore the files, you can use the quick list to select the files and click the menu icon to perform your selection. If the file type you are trying to restore is not listed, you will have to perform a full scan. In addition to the file list, Undo It provides a quick text search to help you find the file you are looking for. You can also perform an image search for the text in the file. The file list is generated by scanning the drives image from sector 0 to the end of the drive. As an avid Windows power user 09e8f5149f
