* Dependent upon the action performed on the shape or text object, it may or may not fire a change event. For example, the user can alter the color of a text object by selecting the color via the color palette. However, if the user edits the text using the keyboard, the change event is not fired. * The action can also be toggled on or off for all shapes or text objects in a drawing. For example, the user can set the visible status of all text objects to "off" via a dropdown menu in the Properties palette. This can then be toggled to "on" by pressing the OK button. a1d647c40b
